

PharmaPure® Low Spallation Pump Tubing

PharmaPure® combines unsurpassed pump life with ultra-low particle spallation, making it the peristaltic pump tubing of choice.

PharmaPure® Flexibility

PharmaPure® is a premium, low spallation, biologically compatible peristaltic pump tubing developed especially for pharmaceutical, biotechnology, and laboratory applications. This tubing meets the demanding challenges of providing unsurpassed pump life with ultra-low particulate spallation and very low permeability.

PharmaPure® Characteristics

The superior flex life characteristics of PharmaPure® simplify the manufacturing process by reducing production downtime due to pump tubing failures.

Its excellent wear properties allow the product to provide extremely low rates of spallation as compared to silicone and other alternate materials.

Because PharmaPure® has low permeability and superior absorption characteristics, it is ideal for protecting sensitive cell cultures and for fermentation, separation, purification, process monitoring, and sterile fill applications.

Biocompatibility

PharmaPure® tubing complies fully with the requirements of USP Class VI and European Pharmacopeia 3.2.9 and FDA 21 CFR Part 177.2600 criteria, and is entirely non-cytotoxic, non-pyrogenic, and non-hemolytic.

To confirm the superior characteristics of PharmaPure® the following tests were also performed: Genotoxicity Tests, Bacteriostasis – Fungistasis Tests, Physiochemical Testing for Elastomeric Closures (USP <381>), Physiochemical Testing for Plastics (USP <661>), Total Extractables (per 21 CFR 177.2600), and full Preservative Absorption Test Protocol evaluating benzyl alcohol, phenol, meta-cresol, methyl paraben, and propyl paraben. PharmaPure® tubing has a Master File with the U.S. Food and Drug Administration.

BIOPHARMACEUTICAL PRODUCTS

High-Performance Peristaltic Pump Tubing

Features/Benefits

- Ultra-low particulate spallation
- Outlasts silicone tubing in peristaltic pumps by up to 30 times
- Provides an excellent barrier with very low permeability
- Withstands repeated autoclaving and sterilization
- Meets all USP Class VI and FDA criteria
- Custom mold and design capabilities

Typical Applications

- Cell harvest and media process systems
- Vaccine manufacturing
- Bioreactor process lines
- Sterile filling
- Diagnostic test products
- Production filtration and fermentation

Low Temperature Flexibility @ -40°F (-40°C)	D380-94	Passed (Still Flexible)
Flame Resistance Classification	UL 94-HB	Passed
Maximum Recommended Operating Temp., °F (°C)	—	275 (135)
Dielectric Strength, v/mil (kV/mm)	D149-97a	567 (22.3)

PHARMAPURE® TUBING IS NOT INTENDED FOR USE AS AN IMPLANT MATERIAL

PharmaPure® is a registered trademark.

Comparative Peristaltic Pump Tubing Life

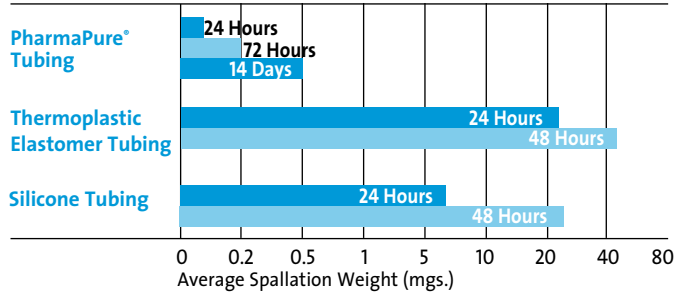

The table below depicts hours until failure of 1/4" ID x 3/8" OD tubing. In each case, a 3-roller pump head was utilized operating at 600 RPM under room temperature (73°F). Tubing failure is measured in hours of use prior to rupture.

The performance of tubing in peristaltic pumping applications is affected by the conditions of use and equipment utilized, along with size and wall thickness of the tubing tested. The data above is presented for information only and should not be utilized for specification purposes.

Spallation Rate Tubing Comparison

The following test data summarizes the spallation results of select tubing used in a peristaltic pump. In each case 1/4" ID tubing was used in a 3-roller pump head operating at 600 RPM under room temperature (73°F). Results from a minimum of 5 samples were averaged to obtain values.

Relative Chemical Resistance Properties*

Acids			Bases			Salts	Alcohols	Ketones
conc.	med.	weak	conc.	med.	weak
